

Grímsvötn volcano

Status Report: 14:00 GMT, 30 May 2011

Icelandic Meteorological Office and Institute of Earth Sciences, University of Iceland

Compiled by: Steinunn S. Jakobsdóttir and Magnús Tumi Guðmundsson.

Based on: IMO seismic monitoring; observation at site.

Saturday morning at 6:30 UTC the volcanic tremor on Grímsfjall (Grímsvötn) rapidly decreased and had disappeared at 7 UTC. Since Thursday the tremor had been intermittent. Today, Monday 30 May, it has been confirmed by the participants of Iceland Glaciological Society's spring expedition that the eruption has ended.

The end of the Grímsvötn eruption is set to 7 UTC Saturday morning 28 May 2011.
